### **PVISUNG MODEL-B**

#### STRETCH-SHRINK STRUCTURE

The shrinking volume is only the 31% of the volume of after being stretching. Compared with competing products, the average volume is 2 times smaller.

#### THERMODYNAMICS HEAT SINK

As the picture shows: Blue arrows represent the direction of low-temperature air flowin; red represent high temperature rise. Heat rising will cause a negative pressure on the air in the profile. The surrounding air below its temperature will be squeezed into the profile, by the atmospheric pressure through the honeycomb hole, to realize the self-circulating hot and cold alternating system.
